

World Happiness

Presented by: Candice Schippers

Last Updated: 19/07/2022

Agenda

1. How do you measure happiness and why?
2. What effects happiness?
3. Conclusions

**How do you measure happiness
and why?**

United Nations Sustainable Development Solutions Network Happiness Report.

**Happiness has strong correlations with
quality of life.**

**Survey's which a sample of people from
countries rank from 0-10 there quality of
life**

What effects Happiness?

Objective

What geographic, demographic, and/or economic factors contribute to a higher Happiness score?

Geography

Happiness Scores vary widely
by country

Little Correlation between
Geographic location and
Happiness

Geographical location is not a
strong indicator for Happiness

People

There is no correlation between happiness and Population

There is a strong positive correlation between Family relationships and Happiness regardless of family size

Why?

Happiness

Happiness score vs Family for each country in 2016

Family Relationships

Health

We found a strong correlation between Health (life expectancy) and Happiness

Are Happy people healthy or healthy people Happy?

Wealth

The Higher the Economy (GDP) the greater the levels of happiness.

Wealthy Countries can better support Families and tend to have better life expectancies

Conclusions

**Wealthy Countries tend
to have higher
Happiness levels on
Average**

**Heathy and Family oriented
counties have greater
happiness levels on Average**

**They are also often Wealthy
Countries**

***Evidence Supports the idea
that Health, Wealth and
Family together influence
Happiness**

*more research is required

Thank You!
